

These **design concepts** aim to show how the Victualling Yard Water Tanks can be re-used in a sustainable manner, and help to **illustrate their enormous potential**.

This can be achieved by enhancing their heritage value, and making them an integral part of the overall development of the **Rosia Bay area as a leisure, cultural and heritage destination**.

Proposed Design Concepts

The new regenerated vaults could be used as interpretation or exhibition spaces & niches, and as viewing platforms from where to enjoy the workmanship of the brick arched volumes against the interplay with the shimmering water below. Feature spot-lighting could further enhance the dramatic effect of the elements and materials in juxtaposition.

HM Victualling Yard – Water Storage Facility
